CONSTRUCTION NOTICE: Water's Edge Promenade Rail Replacement

Today, Waterfront Toronto began work on replacing the existing toe rail that runs along the southern edge of the Water's Edge Promenade in East Bayfront from the Jarvis Slip to Parliament Slip. Before the new toe rail can be installed, construction crews must first remove the existing toe rail and build up the concrete surface to match the existing surfaces south of the granite pavers.

Fast fence has been placed around the work zone from Canada's Sugar Beach to the east side of Sherbourne Common and will remain in place throughout construction of the concrete surface and toe rail. Once the concrete surface is complete, the fast fence will be removed and crews will install a new galvanized steel tube toe rail. All new sections of the toe rail will be anchored to the concrete surface. The existing mooring bollards will not be impacted by this work.

UCC Construction has mobilized on site and will complete this work between the hours of 7:00 a.m. and 5:30 p.m. from Monday to Friday. Moderate noise should be expected with this work. Access to Canada's Sugar Beach, Sherbourne Common, and the Water's Edge Promenade will be maintained at all times.

Construction is expected to be completed by May 31, 2019.
