## **CONSTRUCTION NOTICE: Jarvis Dockwall Reinforcement**

In July, Waterfront Toronto began work on placing approximately 35 metres of existing dockwall reinforcement located along the east side of the Jarvis Street Slip. This project involved necessary structural work on the Jarvis dockwall that was required prior to the start of construction at an adjacent development block that will be the future home of the Waterfront Innovation Centre.

Somerville Construction will have a crew working at the site for the next two weekends – September 1-2 and September 8-9. Weekend work will occur between 7:00 a.m. and 3:00 p.m. Minimal noise should be expected with this work. Access to Canada's Sugar Beach and the Martin Goodman Trail will be maintained at all times.

Dockwall construction is expected to be completed with crews vacated from the site by Wednesday, September 12.
